

Eclipse Training Courses

Introduction to Eclipse Plug-in and RCP Development **- “Deeper” Extension (+2 days)**

This is an extension to the three day course, with more emphasis on delegate-driven learning.

On day 4 delegates are given a plug-in coding assignment. This will last 9 hours and is divided into 3 phases, at each of which additional requirements are introduced. Within this framework delegates are encouraged to investigate and ask about Eclipse and RCP.

During this assignment the instructor circulates from delegate to delegate, offering one-to-one tuition and calling the class together for ad-hoc discussions on functional areas of interest.

The assignment ends early afternoon on Day 5 when a prize is awarded to the best application. The course finishes with a session on the practicalities of developing plug-ins and RCP applications in the real world, where delegates are encouraged to discuss their own particular interests and issues.
