

Incremental Epic Fact Sheet

Unique Selling Points

Incremental Epic is a management information system for handling the full life-cycle of a repair contract, from enquiry through to invoicing. It is unique in four key ways :

1. Focus

It is the only product on the market written from the ground up for ship repair. It is based on systems developed by European Union funded research, and perhaps more importantly, years of experience implementing such systems in repair yards.

2. Simplicity

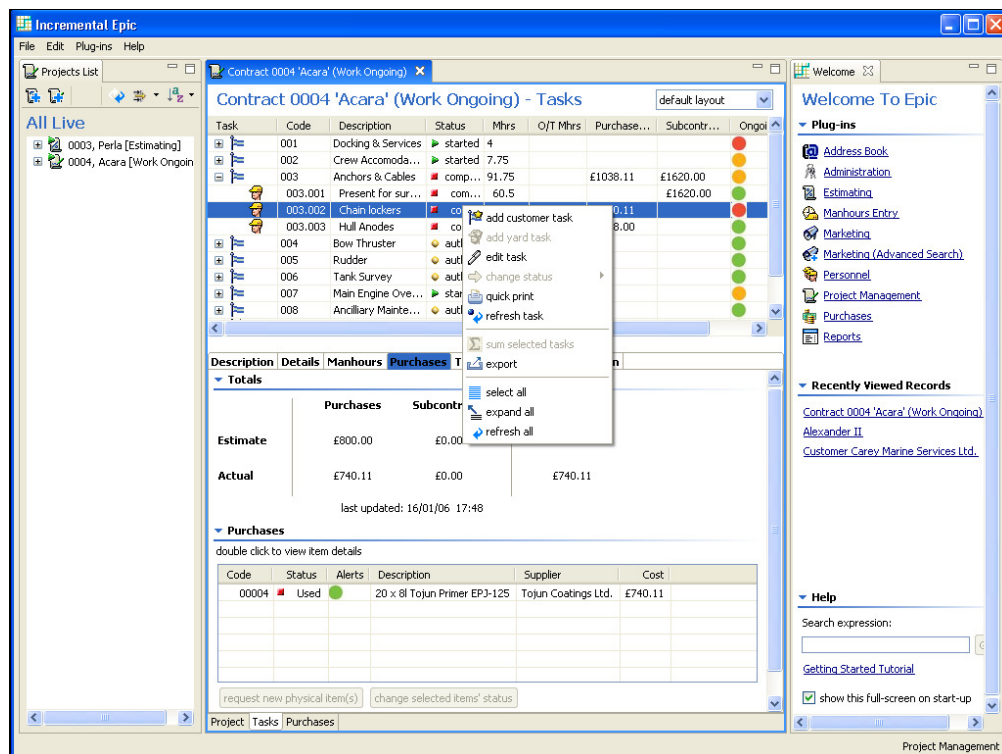

Incremental Epic aims to do everything as simply as possible. It is a production-focused system designed to facilitate production processes, rather than an accounts package.

3. Modularity

Incremental Epic's functionality is delivered in modules, which are installed on a PC-by-PC basis. You only pay for the functionality you use. This also allows for gradual adoption of Epic, deploying it only when there is a reliable cost benefit.

4. Customisation

Most importantly, Incremental Epic has been designed to be customised for every client. It expects to have to work with existing systems, and to fit into existing business processes.
